IGBOKWE CHIAMAKA PECULIAR

Sales Engineer | Technical Pre-Sales

Abuja, Nigeria • +234 706 707 1163 • emmanuelpeculiar645@gmail.com • LinkedIn • GitHub • Portfolio

PROFESSIONAL SUMMARY

Software engineer moving into sales engineering. I spend most of my time translating what a client actually needs into something that works, running discovery, scoping a build, shipping it, then explaining the trade-offs to people who aren't engineers. Recently built Pipeline Lab on my own: a tool that scans a website or API and turns the findings into a lead score and a handoff note a sales team could actually use. Background is in Linux, Docker and AWS, so I'm comfortable in the technical weeds when a prospect's team wants to go there.

CORE COMPETENCIES

Technical Discovery & Requirements Gathering • Solution Design & Proof-of-Concept (PoC) • Product & Solution Demonstrations
Lead Qualification & Scoring • AE Handoff & CRM-Ready Documentation • Embedded Linux / Ubuntu Deployment
Docker & Containerization • AWS Cloud Fundamentals (EC2, ECR, IAM, VPC) • Customer Needs Analysis & Technical Value Communication
API Integration & Testing • Troubleshooting & Root-Cause Analysis • CI/CD & Deployment Workflows

PROJECTS

Pipeline Lab

- A tool that reads a public website or API and turns what it finds into a lead score plus a ready-to-send handoff note for a sales team.
- Tested it against five real, unrelated systems I don't control, GitHub's API, Stripe's API, WordPress.org and two other live sites. It classified the right buyer (frontend vs. backend/API) correctly in every case.
- Every check is read-only: a single request per data point, nothing resembling load testing or an auth attempt. That limit is stated right in the tool's own output, so it's visible to anyone using it not just something I claim here.
- Covers both sides of a sales conversation from one codebase, a frontend mode for engineering buyers, a backend mode for API/platform teams with the scoring weights and language changing to match.

Live: pipeline-lab-lime.vercel.app

Recipe Finder

- Recipe discovery app on real external APIs, not mock data. Packaged with a two-stage Docker build, Node/Alpine for the build, a lightweight Nginx runtime for what actually ships.
- Pushed the production image to Amazon ECR as part of a working AWS deployment pipeline, built and tested on Ubuntu.

AI Travel Assistant

- Recommends flights, hotels and trips against a budget and stated preferences, with a working payment flow built through an API proxy.

PROFESSIONAL EXPERIENCE

Freelance Software Developer | Remote *Dec 2025 – Present*

- Start most projects by talking to the client first, figuring out what they're actually trying to solve before touching the feature they asked for.
- **Built web apps in React, Next.js and TypeScript** and walked clients through the finished product myself, including the parts that didn't make the cut and why.
- Deploy on Linux, package with Docker, follow basic CI/CD, the same ground I'd be standing on in Ubuntu or container conversations.

Software Developer | Excelz Ghana *May 2025 – Nov 2025*

- Worked directly with stakeholders to turn operational requirements into something shippable rather than building off a spec handed down secondhand.
- **Ran solution demos** for people who weren't engineers, which meant learning to explain a technical decision without the jargon that made sense to me but not to them.
- Fixed integration issues as they came up and kept the client in the loop on what actually broke and why.

Software Engineering Programme | ALX Africa *Mar 2024 – Nov 2024*

- Peer-reviewed program building REST APIs end to end auth, validation, integrations, every project defended to other engineers.

TECHNICAL SKILLS

Linux & Cloud: Linux/Ubuntu • Docker • Multi-stage Builds • Nginx • CI/CD • AWS • Amazon ECR • EC2 • IAM • VPC • Vercel

Languages: JavaScript (ES6+) • TypeScript • HTML5 • CSS3 • Python

Frontend: React • Next.js • Vite • Tailwind CSS • State Management (Zustand)
APIs, Data & Tools: REST APIs • JSON • Auth • Postman • MySQL • PostgreSQL • Prisma • Jest • Git/GitHub
Sales Engineering: Discovery • Lead Scoring • AE Handoff Docs • Product Demos • PoC • HubSpot

EDUCATION

B.Tech, Microbiology — Federal University of Technology, Minna, Nigeria
